Interpretation:-

High RBC, Hb, or HCT - dehydration, polycythemia, shock, chronic hypoxia Low RBC, Hb, or HCT - anemia, thalassemia, and other hemoglobinopathies Low MCV - microcytic anemia High MCV - macrocytic anemia, liver disease Low WBC - sepsis, marrow hypoplasia High WBC - acute stress, infection, malignancies Low platelets - risk of bleeding High platelets - risk of thrombosis Microcytic Anemia: Dimorphic Anemia can have low platelet count. Leukocytosis can have Reactive thrombocytosis.
